

-- a是需要更新的, b是查询结果, 根据module_id更新表

```
UPDATE company_module a,  
(SELECT t.* FROM company_module t WHERE t.company_id = 1900) b  
SET a.sort = b.sort, a.parent_module = b.parent_module, a.module_status =  
b.module_status, a.module_name = b.module_name  
WHERE a.company_id IN(SELECT id FROM company_info t WHERE  
t.company_parent_code = '601818' AND id <> 1900) and a.module_id =  
b.module_id;
```

mysql 子查询 根据查询结果更新表

```
1 UPDATE  
2 key_info k1,  
3 (SELECT nid,nick FROM key_info WHERE adddate=CURRENT_DATE-1 and isTmall=4)k2  
4 SET k1.nick=k2.nick  
5 WHERE k1.nid = k2.nid AND k1.adddate=CURRENT_DATE
```
